## Track Group Receives FCC and PTCRB Certification for SHADOW™

SALT LAKE CITY, June 16, 2015 /PRNewswire/ -- Track Group, Inc. (OTCQB: TRCK), announced today that the company's breakthrough 3G tracking solution called SHADOW™ is fully certified for distribution and use in the US market. SHADOW™ received certification by both the Federal Communications Commission (FCC) and PTCRB (PCS-1900 Type Certification Review Board).

Driven by customer demand to improve the affordability and performance of electronic monitoring devices, SHADOW™ is the smallest and lightest device of its kind with a sleek, modern design featuring an enhanced mobile charging capability that makes it easier to use. The device is also 3G compliant and fully supported by all global mobility providers, which means it guarantees better coverage than 2G enabled devices.

SHADOW™ will work seamlessly with Track Group's current software platform as well as its exclusive suite of data analytics applications. This allows customers to deploy the device with no additional training required.

"FCC and PTCRB certifications enable us to offer this technology domestically," said Derek Cassell, Track Group's Divisional President of the Americas. "And that means we can now offer our customers improved and more flexible technology and connectivity at reduced prices enabling public authorities to get more for their taxpayers' money – in both relative and absolute terms".

### About Track Group

Track Group offers end-to-end geo-monitoring solutions that combine robust, real-time tracking devices with advanced data analytics. The current focus is delivering electronic monitoring products and services for the global criminal justice market.
