

Analytics

by TRACK GROUP

The missing perspective.

What it is & why it matters

Track Group Analytics is a suite of software applications used to analyze GPS tracking data. It performs the data analysis in minutes and provides a user-friendly interface to interact with the results. The software is currently in use by State and Local Police, Federal Police, Intelligence Organizations, and Militaries in the Western world. In addition to a broad user base, Track Group Analytics is also in the current Surveillance Training curriculum at the US DHS Federal Law Enforcement Training Center (FLETC).

TRACK GROUP

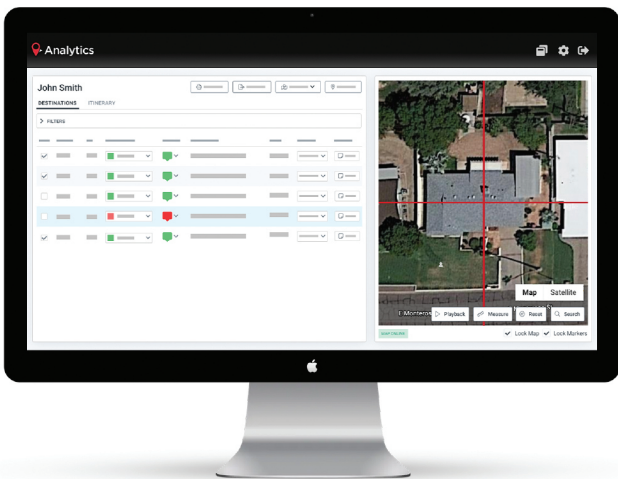

Pattern of life analytics

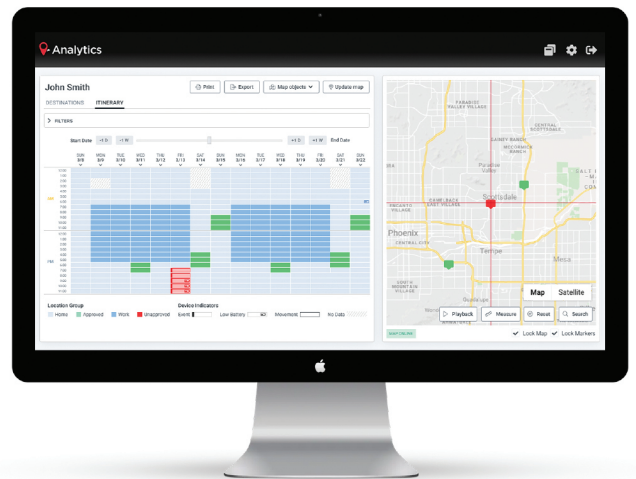

Viewing any more than a day's worth of GPS data is nearly impossible to make sense of without analytics

Analytics provides a visual summary of all locations visited on up to a month's worth of monitoring data

Investigate potentially concerning locations visited by frequency, duration, date and time

Pattern of life visualization of participant travel patterns – home, work, approved locations or unapproved new visits
